

**MassMutual's solar installation will cut electric and fuel costs for the company in an effort to reduce recurring expenses and our carbon footprint.**

# MassMutual's Solar Installation

MassMutual is continually seeking to improve its operating efficiency on its two main campuses in Springfield, MA and Enfield, CT. As part of the company's renewable energy initiatives, MassMutual recently installed solar panels on the roof of its main building at 1295 State St. in Springfield.

The installation, which is comprised of both photovoltaic and thermal solar panels, will cut electric and fuel costs for the company in an effort to reduce recurring expenses and our carbon footprint, as well as allow MassMutual to continue its commitment to sustainable and environmentally friendly operating practices.

For more information about MassMutual's solar installation, click through the links below, which include a slideshow of the project's construction, a fact sheet about the panels and more information regarding MassMutual's green practices.
